 Derby, England

WORK EXPERIENCE

Normandeu Associates

Gainesville, Florida

Database & Infrastructure Engineer

Aug 2024–Present

- Engineered and maintained ETL/ELT pipelines using PL/SQL, Python, and PySpark to process large-scale datasets, while designing and optimizing data models to enhance query performance and downstream analytical workloads
- Created stored procedures, functions, and triggers using PL/SQL to ensure data quality, abstract complex implementation details, and handle real-time events, respectively.
- Optimizing query performance through execution plan analysis and index optimization across different database engines, significantly reducing resource utilization
- Designed and maintained high-availability and disaster recovery solutions across Oracle (RAC, Data Guard) as well as MySQL environments, ensuring minimal RPO and RTO through switchover and failover testing.
- Successfully migrated an on-premises Oracle database to Aurora PostgreSQL using AWS Database Migration Service (DMS) and the AWS Schema Conversion Tool (SCT), while maintaining data integrity and minimizing downtime.
- Applied regular patches and version updates across Oracle, and MySQL environments to address security vulnerabilities, resolve bugs, and ensure audit compliance.

University of Maryland

College Park, Maryland

Graduate Teaching Assistant (Digital Computer Design & Microprocessor Lab)

Aug 2022 – May 2024

- Resolved software issues using Linux tools like GDB, perf, traceroute, tcpdump, and telnet, and addressed hardware problems by replacing faulty components.
- Set up lab equipment, which included microcontrollers (MCU), development boards, oscilloscopes, and simulation software, and ensured they were in optimal condition for student use.

Kuda Bank

Lagos, Nigeria

Database Engineer

Feb 2022–Aug 2022

- Administered Azure SQL Database and SQL Managed Instance, leveraging Azure Monitor and Query Performance Insight to analyze performance, while implementing Azure Defender for SQL to secure data.
- Set up, deployed and managed cloud infrastructure services, including NoSQL and relational databases, storage systems, and virtual machines to meet business requirement, while optimizing cost.
- Improved database efficiency through performance monitoring and tuning, query optimization, and index maintenance, utilizing monitoring tools such as Grafana and Oracle Enterprise Manager (OEM).
- Developed and validated backup and recovery strategies (full, incremental, archive log) by conducting regular recovery drills, including point-in-time recovery, to ensure data integrity.

Guaranty Trust Bank

Lagos, Nigeria

Database Administrator

Nov 2019–Feb 2022

- Implemented and managed high-availability solutions including SQL Server Always On, Oracle RAC, ASM, Dataguard, GoldenGate, and MySQL clusters, achieving 99.99% uptime
- Optimized database performance using AWR, ASH, and ADDM reports for Oracle, SQL Server Profiler for SQL Server, and Percona Toolkit for MySQL, significantly improving query response times.
- Guaranteed data recovery, audit compliance, and business continuity by implementing backup and recovery policies using mysqldump, Percona Xtrabackup, and Oracle RMAN.
- Built data streaming pipelines with Kafka and Oracle GoldenGate processing 3TB weekly, integrating multiple database platforms
- Ensured data quality and minimal downtime during database migrations by implementing phased migrations, utilizing incremental data loading with change data capture (CDC), and performing data validation.

SKILLS

- | | |
|---|---|
| <ul style="list-style-type: none">Databases: Oracle, SQL Server, MySQL, PostgreSQL, Aurora, Amazon RDS, BigQuery | <ul style="list-style-type: none">Data Processing: SSIS, Spark, Hadoop, Glue |
| <ul style="list-style-type: none">Programming: SQL, PL/SQL, T-SQL, Python, Shell Scripting, C/C++, Golang | <ul style="list-style-type: none">Monitoring: Prometheus, Grafana, Oracle Enterprise Manager (OEM) |
| <ul style="list-style-type: none">Data Visualization: Power BI, Tableau | <ul style="list-style-type: none">Data Streaming: GoldenGate, Kafka, Kinesis |

- **Operating Systems:** Unix/Linux, Windows Server
- **Others:** AWS, GCP, Azure, Docker, Exadata

EDUCATION

Master of Science in Electrical Engineering	University of Maryland	May 2024
Bachelor of Engineering in Electrical/Electronic Engineering	University of Benin	Jul 2017

COURSEWORK

- Computer Architecture
- Database System Architecture
- Data Structure and Algorithm
- Compilers and Optimization
- Distributed Systems Design
- Embedded Machine Learning

CERTIFICATIONS

- [Oracle Database 23ai Administration Certified Associate](#)
- [Oracle Autonomous Database Cloud 2025 Professional](#)
- [Oracle Database SQL Certified Associate](#)
- [Microsoft Certified: Azure Data Scientist Associate](#)

PROJECTS – University of Maryland

- Embedded Machine Learning using Python and C** Spring 2024
- Team Lead of 6: Defined task timelines and monitored performance using a Gantt chart to ensure on time completion.
 - Created a neural network-based solution on an embedded device to detect AI-generated images.
- Distributed System using Go** Fall 2023
- Developed a fault-tolerant, Raft-based distributed system, guaranteeing data consistency and reliability through consensus across multiple nodes.
- Compiler Optimization using C++** Spring 2023
- Implemented a function argument instantiation in LLVM, making use of control flow and dataflow analysis.
- Out-of-Order RV-32IF Pipeline Simulator using C** Fall 2022
- A cycle-accurate simulator of an out-of-order RISC-V processor model was designed and implemented based on Tomasulo's Algorithm.
- Multicore Cache Simulator using C** Fall 2022
- Built a multicore cache simulator leveraging the MESI protocol to identify optimal cache configurations.
